

Fire Ride E-Tech

"A pure freeride experience"

Program: Freeride

The perfect blend of an easy and accessible shape with a bullet proof technology that allows accessibility and the first steps to serious freeriding. These boards mix speed and ease of use with an unmatched feeling of acceleration and turning potential. "Plug and play" is the first sensation that will come to your mind when placing your feet onto the Fire Ride! Live the experience of excitement at riding free....

The **Fire Ride E-Tech** fetures:

Full rails from nose to tail have made it possible to use a shorter and wider outline. The scoop-rocker has been flattened especially around the mast track area in order to significantly improve early planing and reduce the impact with chop.

The Increased V towards the tail area, standard for classic freeride boards, allows fantastic turns and easy control through your back foot. Footstrap inserts have been moved towards the middle part of the board to allow easier foot placement and maximize balance, whilst the relatively outboard straps let you blast fast to your hearts content.

Technology:

EPS/ HD Glass Epoxy skin on top and bottom with a Glass crossed fibers laminated in AST moulding process.
